

1. LISTING OF THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Previously Presented) A compound of general formula I, which is an ionic complex:

formula I

in which D is a therapeutically useful molecule selected from the group consisting of a drug, peptide, protein, nucleic acid, mono- or oligosaccharide, and sugar-peptide conjugate;

r is an integer greater than or equal to 1;

p, n and m may be the same or different, and are independently integers greater than or equal to 1;

n and m represent the overall magnitude of the charge on the molecules; and

z and y are charges, either positive (+) or negative (-), such that when z is positive, y is negative and *vice versa*;

and $[(W_q-S-X-L)^{(my)}]$ is a carrier compound, in which

X is a covalent bond, or is a linker group, selected from 2 to 14 atom spacers, which may be optionally substituted, branched or linear;

S is a mono- or oligosaccharide;

L is a lipidic moiety;

W may be absent, or is a 3 to 10 atom alkyl or heteroalkyl spacer, which may be branched or linear, and is substituted with one or more functional groups, each of which is charged or is capable of carrying a charge under physiological conditions; and

q is 0 when W is absent, or is an integer, which ranges from 3 to the number of hydroxyls available for substitution on the mono- or oligosaccharide.

2. (Canceled)

3. (Currently Amended) ~~A compound according to~~ The compound of claim 1, in which D is a ~~biological molecule~~ drug.

4. (Currently Amended) ~~A compound according to~~The compound of claim 1, in which the linker X is attached to the mono- or oligosaccharide S through the anomeric position.
5. (Currently Amended) ~~A compound according to~~The compound of claim 1, in which the linker X is attached to the mono- or oligosaccharide S via an O-glycoside, C-glycoside, N-glycoside, S-glycoside, amide, urea, thiourea, carbamate, thiocarbamate, carbonate, ether or ester bond.
6. (Currently Amended) ~~A compound according to~~The compound of claim 1, in which the linker X is attached to the mono- or oligosaccharide S through a position other than the anomeric position via an amide, urea, thiourea, carbamate, thiocarbamate, carbonate, ether or ester bond.
7. (Currently Amended) ~~A compound according to~~The compound of claim 1, in which the linker X is attached to the lipidic moiety L via an amide, ester, ether, imine, carbamate, urea, thiourea, or carbonate linkage.
8. (Currently Amended) ~~A compound according to~~The compound of claim 1, in which W is substituted with one or more functional groups selected from the group consisting of an amidine, guanidinium, carboxylate, tetrazole, hydroxamic acid, hydrazide, amine, sulfate, phosphonate, phosphate and a sulfonate group.
9. (Currently Amended) ~~A compound according to~~The compound of claim 1, in which the lipidic moiety L is composed of:
 - (a) any combination of 1 to 4 lipoamino acids and/or lipoamino alcohols, of general formula IIa of IIb

IIa

IIb

in which each of R¹ and R² may independently be:

(i) hydrogen, or

(ii) a linear or branched chain alkyl or alkenyl group having 4 to 24 carbon atoms, which may optionally be substituted, provided that the substituents do not significantly adversely affect the lipophilic nature of the group,

with the proviso that both R¹ and R² cannot be hydrogen at the same time;

(b) a glycerol-based lipid of general formula IIIa or IIIb

IIIa

IIIb

in which R¹ and R² are as defined in general formula IIa, and

X is a linker group as defined in general formula I; or

(c) a trishydroxymethylmethylamine-based lipid of general formula Iva or Ivb

in which R^1 , R^2 , and R^3 are independently hydrogen or a linear or branched chain alkyl or alkenyl group having 4 to 24 carbon atoms, or an aryl or arylalkyl group having 6 to 24 carbon atoms, said alkyl, alkenyl, aryl or arylalkyl groups may be optionally be substituted, provided that the substitutions do not significantly adversely affect the lipophilic nature of the group, and X is as defined in general formula I;

with the proviso that at least one of R^1 , R^2 , and R^3 must not be hydrogen.

10. (Currently Amended) ~~A compound according to~~ The compound of claim 8, in which the lipidic moiety L contains one or more charged functional groups.

11. (Currently Amended) ~~A compound according to~~ The compound of claim 10, in which the one or more charged functional groups are selected from the group consisting of amidinium, guanidinium, carboxylate, tetrazoline, hydroxamate, hydrazido, ammonium, sulfate, phosphonate, phosphate, and sulfonate.

12. (Currently Amended) ~~A compound according to~~ The compound of claim 1, in which S is selected from the group consisting of a mono-, di- or tri-saccharide, and the lipidic moiety is one to three lip aminoacids of general formula IIa or IIb:

in which each of R¹ and R² may independently be:

- (i) hydrogen, or
 - (ii) a linear or branched chain alkyl or alkenyl group having 4 to 24 carbon atoms, which may optionally be substituted, provided that the substituents do not significantly adversely affect the lipophilic nature of the group,
- with the proviso that both R¹ and R² cannot be hydrogen ~~be hydrogen~~ at the same time.

13. (Currently Amended) ~~A compound according to~~ The compound of claim 1, in which r is greater than p.

14. (Canceled)

15. (Canceled)

16. (Currently Amended) ~~A compound according to~~ The compound of claim 1, in which D is a sulfated oligosaccharide, charged oligosaccharide, sulfated antithrombotic or an aminoglycoside.

17. (Currently Amended) ~~A compound according to~~The compound of claim 13, in which D is a sulfated oligosaccharide, charged oligosaccharide, sulfated antithrombotic or an aminoglycoside.
18. (Withdrawn) A method of preparing a compound according to claim 1, comprising the step of forming a covalent bond between the mono- or oligosaccharide S and the linker X or the lipid L, in which the bond between S and X is an O-glycoside, C-glycoside, N-glycoside, S-glycoside, amide, urea, thiourea, carbamate, thiocarbamate, carbonate, ether or ester bond, and the bond between X and L is an amide, ester, ether, imine, carbamate, urea, thiourea, or carbonate bond.
19. (Currently Amended) A composition comprising ~~thea compound of~~a compound ~~of~~according to claim 1 ~~and , together with~~ a pharmaceutically-acceptable carrier.
20. (Withdrawn) A method of preparation of a compound according to claim 1, comprising the step of mixing a drug molecule D with $[(W_q-S-X-L)^{(my)}]$ in which W, q, S, X, L, m and y are as defined in claim 1 in solution, followed by removal of the solvent(s) to provide a homogenous mixed salt.
21. (Withdrawn) A method of delivery of a therapeutically useful molecule, comprising the step of administering the molecule to a subject in need of such treatment in the form of a compound according to claim 1.
22. (Withdrawn) A method according to claim 21, in which the administration is by the oral route.
23. (Withdrawn) A method of treating or preventing a pathological condition, comprising the step of administering a suitable compound according to claim 1 to a subject in need of such treatment.
24. (Currently Amended) ~~A compound according to~~The compound of claim 1, in which the compound is piperacillin/2-acetamido-2-deoxy-N-(1-amino-(R/S)-dodecoyl)- β -D-glucopyranosylamine ionic complex.

25. (Currently Amended) ~~A compound according to~~The compound of claim 1, in which S is a low molecular weight heparin.
26. (Currently Amended) ~~A compound according to~~The compound of claim 25, in which the low molecular weight heparin is selected from the group consisting of fondaparinux, enoxaparin, delteparin, nadroparin and danaparoid.
27. (Currently Amended) ~~A compound according to~~The compound of claim 26, in which the low molecular weight heparin is fondaparinux.
28. (Currently Amended) A pharmaceutical composition comprising ~~thea~~ compound ~~of~~according to claim 27, ~~and~~ together with a pharmaceutically acceptable carrier.
29. (New) The compound of claim 3, wherein D is piperacillin.
30. (New) The compound of claim 1, wherein D is a drug, peptide, mono- or oligosaccharide, or sugar-peptide conjugate.
31. (New) The compound of claim 30, wherein said drug is an antibiotic.
32. (New) The compound of claim 30, wherein said antibiotic is selected from the group consisting of gentamycin sulfate, neomycin, amakacin, tobramycin, netilmicin, and piperacillin.
33. (New) The compound of claim 30, wherein said oligosaccharide is a heparanoid or sulfated oligosaccharide.
34. (New) The compound of claim 33, wherein said oligosaccharide is a low molecular weight heparin.

35. (New) A compound of general formula I, which is an ionic complex:

in which D is a therapeutically useful molecule selected from the group consisting of a sulfated oligosaccharide, a charged oligosaccharide, a sulfated antithrombotic, and an aminoglycoside;

r is an integer greater than or equal to 1;

p, n and m may be the same or different, and are independently integers greater than or equal to 1;

n and m represent the overall magnitude of the charge on the molecules; and

z and y are charges, either positive (+) or negative (-), such that when z is positive, y is negative and *vice versa*;

and $[(W_q-S-X-L)^{(my)}]$ is a carrier compound, in which

X is a covalent bond, or is a linker group, selected from 2 to 14 atom spacers, which may be optionally substituted, branched or linear;

S is a mono- or oligosaccharide;

L is a lipidic moiety;

W may be absent, or is a 3 to 10 atom alkyl or heteroalkyl spacer, which may be branched or linear, and is substituted with one or more functional groups, each of which is charged or is capable of carrying a charge under physiological conditions; and

q is 0 when W is absent, or is an integer, which ranges from 3 to the number of hydroxyls available for substitution on the mono- or oligosaccharide.

36. (New) A lipoamino acid or lipoamino saccharide conjugate of general formula I:

wherein said conjugate forms an ionic complex with a therapeutically-useful drug. D;

r is an integer greater than or equal to 1;

p, n and m may be the same or different, and are independently integers greater than or equal to 1;

n and m represent the overall magnitude of the charge on the molecules; and

z and y are charges, either positive (+) or negative (-), such that when z is positive, y is negative and *vice versa*;

and $[(W_q-S-X-L)^{(my)}]$ is a carrier compound, in which

X is a covalent bond, or is a linker group, selected from 2 to 14 atom spacers, which may be optionally substituted, branched or linear;

S is a mono- or oligosaccharide;

L is a lipidic moiety;

W may be absent, or is a 3 to 10 atom alkyl or heteroalkyl spacer, which may be branched or linear, and is substituted with one or more functional groups, each of which is charged or is capable of carrying a charge under physiological conditions; and

q is 0 when W is absent, or is an integer, which ranges from 3 to the number of hydroxyls available for substitution on the mono- or oligosaccharide.

37. (New) A compound of general formula I:

formula I

wherein r is an integer greater than or equal to 1;

p, n and m may be the same or different, and are independently integers greater than or equal to 1;

n and m represent the overall magnitude of the charge on the molecules; and

z and y are charges, either positive (+) or negative (-), such that when z is positive, y is negative and *vice versa*;

and $[(W_q-S-X-L)^{(my)}]$ is a carrier compound, in which

X is a covalent bond, or is a linker group, selected from 2 to 14 atom spacers, which may be optionally substituted, branched or linear;

S is a mono- or oligosaccharide;

L is a lipidic moiety;

W may be absent, or is a 3 to 10 atom alkyl or heteroalkyl spacer, which may be branched or linear, and is substituted with one or more functional groups, each of which is charged or is capable of carrying a charge under physiological conditions;

q is 0 when W is absent, or is an integer, which ranges from 3 to the number of hydroxyls available for substitution on the mono- or oligosaccharide; and

wherein D is a drug molecule that forms an ionic complex with said compound.
